

Microelectronic gauge pressure sensors P Series

- Resolution 0,01 %
- Operating pressure range
from 0-0,16 to 0-40 MPa
- Operating temperature range
from -20 to +200 °C
- Electrical insulation
strength – 700 V
- Titanium body

Applications

- ★ Industrial automatics
- ★ Pumping stations/ Compressors
- ★ Heat metering

■ The sensors are intended for proportional conversion of pressure into electric signal.

New solutions in pressure measurement – “Silicon-on-Sapphire” Technology

- ✓ Sensitive element of pressure sensors is a two-layer sapphire-titanium membrane with monocrystal silicon resistance strain gauges.
- ✓ Monocrystal sapphire membrane is a perfect elastic element that due to connection with titanium acquires the best quality as to the deformation level, and preserves its elastic properties up to +400°C.
- ✓ Monocrystal silicon resistance strain gauges are automatically connected with sapphire (heteroepitaxy method) and provide almost no hysteresis or fatigue effects.
- ✓ Exceptional insulating properties and radiation resistance of sapphire enable to use the sensitive element within temperature range from -200 to +350°C under the effect of high electromagnetic interferences and radiation.
- ✓ Strain gauges elements are manufactured in groups by solid-state micro-electronic methods and provide high quality and good repeatability of the output parameters.

Electrical connection

L - flexible wire 80 mm length;

P - pin 4,5 mm height

Order example of pressure sensor

Pressure sensor of P series, intended for pressure conversion from 0 to 0,4 MPa, for operation within temperature range from - 40 to + 100 °C, with "closed bridge" circuit, flush membrane, DC voltage power supply, diameter of the conjoint part 17 mm and flexible wire 80 mm length:

Pressure sensor P 0,4-101-V-D17-L.

Note: if wished, the wire length (standard 80 mm) can be changed, in this case the required length should be added to the wire code L, for example:

Pressure sensor P 0,4-101-V-D17-L120.

10 Marking

Marking on the sensor body must contain following information: series, upper gauge pressure limit in MPa, version of the operating temperature range, circuit type, version of the membrane, conjoint part code and order number
